Great comments, Ruben! I agree with the goals of being able to support reporting requirements against frameworks and regulations, but think we should not list specific ones in the charter. I think the goal should be to enable the automation of tasks like maintaining the security program with the ability to prioritize risk and perform remediation activities. Reporting is essential for many organizations, but I don't think we should be specific as to which report types or formats will be supported.

How do people feel about having the focus within the SACM effort where we are providing the capabilities and then having ancillary work that provides the desired mapping to frameworks and regulations by the communities (or vendors) that need to support those regulations and frameworks?

Thanks,  
Kathleen

Subject: [sacm] Proposed SACM Charter Comments feedback

To all:

Here's my two cents worth to the SACM charter.

Ruben David Oliva
